KNX Remote Controller
User Manual

Introduction

▶ he R Series remote controller seamlessly integrates the KNX Remote Controller (transmitter) with the KNXconverter.BT (receiver), eliminating the need for a central host and complicated network configurations. By relying solely on the standard KNX communication protocol, it achieves stable and efficient local intelligent control. With the advanced ETS programming software, users can easily customize personalized control schemes tailored to their needs, whether in residential, commercial, office, or industrial environments, offering unprecedented convenience and flexibility.

▶ At the heart of the R Series remote controller is a minimalist yet elegant 4-button design, supporting various interaction modes and featuring LED backlight indicators. This not only meets users' demands for intuitive control but also provides unlimited creative possibilities for professional commissioning. Whether it's lighting adjustment, shading control, environmental temperature and humidity management, or switching complex scene modes, the R Series KNX rotary remote controller handles it all effortlessly, delivering unparalleled comfort and luxury to your automated living experience.

Transmitter Selection

KNX Rotary Remote Controller - Transmitter Terminal KNX Remote Controller			
Model	R01	R02	R03
Features			
Specifications			
Buttons	4 keys + rotary knob		
Installation	Desktop / Desktop & Wall -mounted		
Dimensions	R01: Ø67 mm × H66.5 mm R02: Ø74.8 mm × H67.7 mm R03: Ø74.8 mm × H17.8 mm		
Button Lifespan	10,000 presses		
Charging Voltage	DC5V(Type-c)		
Charging Time	1 hour		
Standby Time	720 hours (lab data)		
Transmission Range	8 meters (line of sight; subject to actual site conditions)		
Protection Level	IP20		
Operating Temperature	0°C~40°C		
Transport Temperature	-20°C~60°C		
Storage Temperature	-20°C~60°C		

Selection of Reception

Receiver Selection KNX Rotary Remote Controller - Receiver Terminal KNX Converter. BT	
Model	KNX Converter. BT
Features	
Appearance	
Communication	KNX to Bluetooth
Installation	86 base box or ceiling - mounted
Dimensions	L52mm*W45mm*H13mm
Power Supply Voltage	DC 21~30V (KNX red/black)
Bus Current	30mA/30V
Programming Software	ETS software
KNX Programming	Physical button on receiver
Bluetooth Button	No operation required
Transmission Range	8 meters (line of sight; subject to actual site conditions)
Protection Level	IP20
Operating Temperature	0°C~40°C
Transport Temperature	-20°C~60°C
Storage Temperature	-20°C~60°C

Product Features

The KNX Rotary Remote Controller is designed with simplicity and ease of use, enabling users to quickly adapt to its operation. The buttons and rotary knob support a variety of functions, including short press and long press actions.

Button Design
Equipped with 4 independent buttons, each of which can be assigned to different functions, such as: Lighting control, Curtain control, Custom device control.

Dimming and Color Adjustment
The remote supports light dimming and color adjustment, allowing users to create different ambiances by adjusting brightness and color temperature.

Scene Settings
A single button press can trigger coordinated actions across multiple devices, simplifying the activation of pre-configured scenarios.

Custom Settings
1-byte customization: Supports up to 4 cycles of transmission.
2-byte customization: Also supports up to 4 cycles of transmission.

One-touch curtain operation
Support long press and short press operation curtain, Short press can open/close/stop.

The knob supports the following functions (accessed by double-clicking the button to enter rotary mode):

1-bit control: On/Off functions.
4-bit control: Brightness or temperature adjustment.

1-byte control: Volume, brightness, or curtain control.

2-byte control: Color temperature or temperature regulation.

Off-line Control
The KNX remote control also supports offline control, allowing users to control smart home devices even in the absence of a network.

Warranty

Dear Valued Customer, Thank you for choosing GVS's KNX Rotary Remote Controller products. Products purchased through official channels are entitled to the Three Guarantees Service as stipulated by national regulations.

Warranty Terms

- Within 7 days of purchase, if a performance failure occurs, the consumer may choose a refund, replacement, or repair.
- Within 15 days of purchase, if a performance failure occurs, the consumer may choose a replacement or repair.
- Within 1 year of purchase, if a performance failure occurs, the consumer may opt for free repair services.
- Post-warranty period, consumers can opt for paid repair services for performance failures. Exclusions from Warranty Service
The following circumstances are not covered by the warranty: damage caused by human actions, no valid invoice and three guarantees voucher, Damage or failure caused by force majeure, etc

Programming Instructions

- Programming Instructions**
- Select the corresponding ETS project file and import it into the ETS software.
 - Add the device to the project created in the ETS software.
 - Press the programming button on the device. Use the ETS software to assign and download the physical address. After the download is complete, the red LED indicator will turn off.
 - Open the device database in the ETS software. Configure the parameters and perform an application download.
 - Change the physical address, repeat Step 3.
 - After updating parameter settings, repeat Step 4 to implement new functionality.

The knob remote control receives the terminal key indicator light

KNX programming LED: red light is often on for programming mode, red light out for programming mode, red light flashing is missing ETS application need to download ETS application. Bluetooth status LED green is connected, green out for no power supply, green light slow flash for the sending terminal and receiving terminal dislink.

The knob remote control sends the terminal button indicator light
